

Vladimir Golubev

BACKEND TECH LEAD

Backend engineer → tech lead. I'm the one fuzzy specs go to die.

Team leadership | mentoring | code review | architectural sign-off | release management | system design | backend architecture

Summary

Backend engineer turned technical lead — 13+ years building, scaling and owning production systems, with team-leadership and lead/architect responsibilities since 2018. I design high-load distributed backends and I'm accountable for the architectural decisions behind them.

Plain version of what I do: requirements analysis and system design (I'd rather pick a fuzzy spec apart for an hour than ship a bug for a month), architecture trade-off decisions (monolith vs. microservices, relational SQL vs. column-store — I choose by load, not by trend), and the documentation, code review and testing discipline that keep systems alive for years.

PROOF POINTS

- Designed and scaled a multi-tenant **CPA (cost-per-action / affiliate marketing) platform** whose API peaked at **7,000 requests per second**.
- A real-time **statistics / analytics core** I architected in 2016 is still running in production a decade later.
- Early adopter of **ClickHouse** for analytics; drove team-wide adoption of Vue.js and Docker.
- Led a backend team from 2018 — code review, mentoring, architectural sign-off, automated-testing rollout.

AI-augmented development as a default, not a novelty. I use Claude / Claude Code, ChatGPT, GitHub Copilot, Cursor and Codex daily, and I own the agentic harness end-to-end. I stress-test AI-assisted workflows in my independent game and web studio (nomorecare.gg), where I am sole architect, engineer and operator.

Core stack: PHP (5–8), Laravel, system design, microservices, distributed systems, AWS, ClickHouse, Terraform, Docker, Redis; relational and NoSQL databases (MySQL, MariaDB, PostgreSQL, ClickHouse, MongoDB, Couchbase, DynamoDB, OpenSearch).

Open to Tech Lead, Software Architect and Staff Engineer roles where trade-offs and decisions matter more than volume of code. Remote-first, based in Novi Sad, Serbia, on Belgrade time (CET/CEST, UTC+1/+2). Available B2B via a Georgian individual entrepreneur; also open to employment under Serbian labour law. English C1, Russian native.

Work Experience

AI Architect — NoMoreCare · Jun 2026 – Present · Self-employed / Remote
Independent game and web development studio. Own product design, software architecture, AI-assisted development and operations.

- Developed and launched Bunchill (bunchill.co), a web app for choosing entertainment together, with shared lists and voting; owned the Rust / SQLite backend, frontend and deployment.
- Developed and launched attic.wladyspb.pro, owning the website's implementation and publishing workflow.
- Developing **BuildYourSkillTree** in **Godot / C#**: branching skill trees, resource progression and ascension mechanics, with automated tests and UI verification.

Rust, Python, C#, Godot, AI Pipelines, OpenHands SDK, Codex, SQLite, Jev, LM Studio

Senior Backend Engineer / Tech Lead — Quintegro · Jul 2022 – Jun 2026 · Remote
Technical lead and senior backend engineer across confidential automotive analytics and marketplace products.

- As **tech lead and senior backend engineer**, designed from scratch the backend for a rare-vehicle market analytics service: processed **300,000+ historical sale records**, produced aggregates across multiple market dimensions, and delivered date-aware currency conversion, watched-data alerts and request-history recommendations.
- Built a local development framework for a **43-microservice fleet**, saving roughly **15–20 minutes on every validation iteration** and removing contention around one shared dev environment used by four developers and two QA engineers.
- Implemented automated abuse controls that fully stopped a coordinated spam-registration campaign; also rewrote an in-house DynamoDB library from raw arrays into a query-builder API.
- Owned production releases and incident recovery across both products.

Technical Leadership, System Design, Microservices, Distributed Systems, PHP, Laravel, MariaDB, AWS, DynamoDB, OpenSearch, CloudWatch, Terraform, Release Management, Incident Recovery

Senior Backend Developer — Playkot · Jul 2021 – Jun 2022 · St. Petersburg
Backend engineer on a live mobile-game backend under production traffic: implemented **multi-provider authentication with account linking**, and optimised **partial-load / lazy-loading patterns over MongoDB** for hot player data (performance optimisation under load).

Senior Backend Developer — Rabota.ru · Oct 2020 – Jun 2021 · St. Petersburg
Backend engineer on one of Russia's largest job boards (high-traffic web platform): built the **in-account customer notification service**, migrated client-account features off a legacy codebase onto the new internal framework (**legacy modernisation**), and extended automated-test coverage across PostgreSQL-backed services.

Lead Backend (PHP) Developer — Smart Line · Apr 2015 – Oct 2020 · St. Petersburg
Grew a small internal PHP utility into offergate.pro — a multi-tenant **CPA (cost-per-action / affiliate marketing) platform** with two product surfaces and a ClickHouse analytics stack.

- Designed a real-time **statistics / analytics core** in 2016 that still runs in production today; the platform API peaked at **7,000 requests per second** (high-load system design).
- Led a small backend team from 2018: code review, mentoring, architectural sign-off, and a team-wide rollout of automated testing.

Technical Leadership, Team Leadership, Mentoring, System Design, High-Load Systems, PHP 7, Laravel, Vue.js, ClickHouse, MariaDB, Redis, Couchbase, Docker, Payment Gateway Integration

Full-Stack Engineer — TAXOFT · Jan 2013 – Mar 2015 · St. Petersburg
Designed, built and maintained the full software stack of a taxi-aggregator / ride-hailing service end-to-end — first hands-on exposure to production scale and on-call operations.

Projects

NoMoreCare — Independent Game & Web Studio

nomorecare.gg →

Solo (one-person) indie game studio with three roguelike games in development — sole owner of design, software architecture, code, infrastructure and release. Used as a **real-world test bed for agentic AI / LLM-assisted (“AI-in-the-loop”) development workflows**.

Skills

PINNED

Technical Leadership

Software Architecture

System Design

leadership Technical leadership, Team leadership, Mentoring, Code review, Architectural sign-off / decision ownership, Release management

architecture & systems System design, Software architecture, Distributed systems, Microservices, Monolithic architecture, High-load / high-throughput systems, Scalability, Performance optimization, API design, REST APIs

roles / seniority Technical Lead, Software Architect, Staff Engineer, Senior Backend Engineer, Engineering Team Lead

cloud & infra AWS, Docker, Terraform, CloudWatch, CI/CD, Linux, Infrastructure as Code

languages & runtime PHP (5, 7, 8), Laravel, JavaScript, SQL, Rust, Python, C#, Godot

data ClickHouse, MySQL, MariaDB, PostgreSQL, SQLite, MongoDB, Couchbase, DynamoDB, OpenSearch, Redis, NoSQL, Relational databases, Column-store databases, Database design

quality PHPUnit, Behat / BDD (behavior-driven development), Test automation, Technical documentation

domains Payment gateway integration, Billing / payment processing, Affiliate / CPA platforms, Marketplaces, Analytics / statistics platforms, Game backends, Notifications

ai-augmented development Claude / Claude Code, ChatGPT, GitHub Copilot, Cursor, Codex, Agentic AI, AI Pipelines, Jev, LM Studio, LLM-assisted development, Agentic frameworks, Full-cycle AI product delivery, OpenHands SDK, LLM fine-tuning, Local LLM setup: OpenHands SDK + LM Studio, Python pipelines

frontend (working level) Vue.js, HTML, CSS, JavaScript

languages Russian (native), English (C1)
